

CherryBite - Product Overview & Development Guide

1. What is CherryBite?

CherryBite is a community-driven food discovery platform focused on helping people find genuinely good food through verified experiences instead of paid promotions, influencer marketing, or fake reviews.

Today many people discover food through Instagram reels, YouTube shorts, and influencer content. However, many recommendations are sponsored, exaggerated, or do not match the actual food quality.

CherryBite aims to solve this problem by creating a trust-based food review ecosystem where real people verify each other's experiences.

2. Core Mission

"Help people discover food that actually tastes good."

Not another food delivery app.

Not another social media app.

Not another restaurant listing app.

CherryBite is a food trust platform.

3. Target Users

Primary Users

- Food lovers
- College students
- Travelers
- Office employees
- Local food explorers

Secondary Users

- Restaurant owners
- Small tea shops
- Local food businesses
- Hidden food spots

4. Main Problem We Solve

Current Problems:

- Instagram food reels are often paid promotions.
- Influencer reviews may not be trustworthy.
- Google ratings can be manipulated.
- Small hidden gems remain undiscovered.
- Good dishes inside average restaurants are difficult to find.

CherryBite Solution:

- Review specific dishes, not only restaurants.
 - Community confirms or disagrees with reviews.
 - Trust scores determine visibility.
 - Hidden gems get discovered.
 - Nearby food discovery based on real experiences.
-

5. Unique Selling Points (USP)

Community Verification

Instead of Likes:

Users can:

✓ Tried & Confirmed

or

✗ Not Accurate

This validates review authenticity.

Dish-Based Reviews

Most apps review restaurants.

CherryBite reviews dishes.

Example:

Restaurant: Aladdin's Kitchen

Dish: Classic Shawarma

Users review the dish experience.

Trust Score System

Every user has a trust score.

Trust increases when:

- Reviews receive confirmations
- Users provide quality content
- Users consistently post authentic experiences

Trust decreases when:

- Reviews receive disagreements
 - Reviews are deleted frequently
 - Suspicious behavior is detected
-

Hidden Gem Discovery

Find places with:

- High trust reviews
 - Low popularity
 - Strong community approval
-

6. Application Sections

Authentication

Signup:

1. Enter phone/email
2. Receive OTP
3. Verify OTP
4. Enter full name
5. Choose username
6. Create account
7. Redirect to home
8. Ask location permission

Login:

1. Enter phone/email
2. Verify OTP
3. Login

4. Redirect home

Home Feed

Shows:

- Reviews from followed users
- Nearby trusted reviews
- Community verified experiences

Feed Card Contains:

- User profile
 - Food image
 - Dish name
 - Restaurant name
 - Rating
 - Review text
 - Confirmation count
 - Comments
-

Following Feed

Shows reviews only from:

- Users you follow

Purpose:

Build a trusted food network.

Discover

Shows:

- Hidden gems
 - Nearby food spots
 - Trending dishes
 - Most trusted reviews
-

Place Details

Contains:

- Place information

- Top dishes
 - Community verdict
 - Hype vs Reality score
 - Reviews
-

Add Review

Users can:

- Select place
- Select dish
- Upload photo
- Rate food
- Add description
- Choose tag

Tags:

- Worth It
 - Overhyped
 - Hidden Gem
-

User Profile

Shows:

- Avatar
 - Trust score
 - Followers
 - Following
 - Reviews
 - Badges
 - Progress system
-

7. Badge System

Badges create motivation.

Examples:

First Review

Post first review.

Street Food Hunter

Review 10 street food locations.

Shawarma Explorer

Review 10 shawarma dishes.

Trusted Reviewer

Receive 100 confirmations.

Hidden Gem Finder

Discover underrated places.

Progress bars should show:

Current progress → Next badge.

8. Social Features

Allowed:

- Follow users
- Comments
- Comment replies
- Notifications

Avoid:

- Like system
- Popularity contests
- Influencer culture

CherryBite focuses on trust.

9. Notification System

Notifications for:

- New follower
- Comment received
- Reply received
- Review confirmed
- Review disagreed

Bell icon shows unread count.

10. Location System

Purpose:

Verify that users actually visited the place.

Review Validation:

User Location vs Place Location

Within approved radius:

Verified Review

Outside radius:

Unverified Review

Location also powers:

- Nearby places
 - Discover page
 - Food recommendations
-

11. Place Creation Flow

Who can add places?

Any user.

Flow:

User adds place → Pending status → Admin approval → Active

Supported Places:

- Restaurants
 - Cafes
 - Tea shops
 - Juice shops
 - Small food stalls
-

12. Design Philosophy

NOT:

- Swiggy
- Zomato
- Uber Eats

NOT:

- Instagram

Design Style:

- Premium
- Dark cherry theme
- Food-first experience
- Community-focused

Primary Color:

Dark Cherry Red

Accent:

Wine / Grape inspired highlights

Mood:

Premium + Trustworthy + Modern

13. Technology Stack

Frontend

- React
- TypeScript

15. Future Features

Phase 2:

- AI fake review detection
- Personalized recommendations
- City rankings
- Food trails
- Food maps

Phase 3:

- Restaurant owner dashboard
 - Analytics
 - Premium memberships
-

Final Vision

CherryBite is a trust-first food discovery platform where community validation matters more than popularity.

Goal:

Replace paid influencer recommendations with authentic food experiences verified by real people.
